PO Box 90012
Bellevue, WA 98009-9012

September 11, 2020

RE: 2019 Electric Service Reliability Report

Dear Nicholas,

Enclosed find Puget Sound Energy's Bellevue Electric Reliability Report for calendar year 2019. For the 15th consecutive year, service reliability experienced by Bellevue customers in 2019 was well above that experienced by all PSE customers in the aggregate. Of the 96 distribution circuits serving Bellevue customers in 2019, 58 circuits had reliability numbers better than the system wide performance (27 circuits experienced no unplanned outages). 38 circuits had SAIDI or SAIFI figures that exceeded the 2019 PSE system wide performance values.

The report content for the 2019 report is the same as our 2018 report reorganized to present summary information up front:

- Preface summarizing performance 2019 reporting
- 2015 – 2019 System Average Interruption Duration Index (SAIDI) & System Average Interruption Frequency Index (SAIFI) Five Year History
- 2015 – 2019 SAIDI & SAIFI Five Year History Illustrated (graphed)
- 2019 Performance for Circuits Serving Bellevue
- 2019 Outages Summaries for Circuits Serving Bellevue
- 2019 Circuits Serving Bellevue Exceeding PSE SAIDI or SAIFI
- 2015 – 2019 Circuits That Exceeded PSE System SAIDI or SAIFI Five Year Overview
- 2019 Outage Events by Circuit list
- 2019 Report Codes Legend

We report PSE system-wide and Bellevue circuit SAIDI values consistent with reporting to the Washington State Utilities & Transportation Commission (WUTC). In response to requests we have restated SAIDI values for 2015 so that values for all years are calculated using the same methodology for consistent comparison over the five year reporting period.

Also included is our 2019 Service Quality Report Card available at PSE.com.

Please contact me at (425)462-3852 or e-mail at andy.swayne@pse.com to discuss any questions or concerns you may have about the report materials.

Sincerely,

Andy Swayne
Senior Municipal Liaison Manager

CC:

Brian Rodan – City of Bellevue, Franchise Manager

RaeLynn Asah – PSE, Supervisor Municipal Relations

David Hoffman – PSE, Local Government Affairs & Public Policy Manager

Cathy Koch – PSE, Director Planning

Enclosures

PREFACE TO BELLEVUE ELECTRIC RELIABILITY REPORT FOR 2019

This preface summarizes Bellevue performance reporting for the 2019 calendar year, consistent with reporting to the Washington Utilities and Transportation Commission (WUTC) using System Average Interruption Duration index (SAIDI) and System Average Interruption Frequency Index (SAIFI). All SAIDI values in the 2019 report, including restated values for performance years prior to 2016, were calculated using the IEEE 1366 methodology as summarized below. SAIFI values calculation has not changed from past years.

System Average Interruption Duration Index (SAIDI)

Prior to 2010, PSE calculated and reported single year SAIDI values excluding Major Storm event (affecting 5% or more of total PSE electric customers) outages. During the period 2010 - 2015 PSE calculated and reported rolling five –year average SAIDI values (the current year and four preceding years) including Major Storm event outages. Eligible outages having durations longer than 1 minute were included in SAIDI calculations.

In consultation with the WUTC, in 2016 PSE began using the Institute of Electrical and Electronics Engineers (IEEE) Standard 1366 methodology for calculating SAIDI values reported to the WUTC. The IEEE Standard 1366 defines electric power reliability indices and factors that affect their calculations. The switch to the IEEE 1366 methodology returned calculation of single year SAIDI values excluding outage events occurring on *Major Event Days*. Eligible outages having durations longer than 5 minutes are included in SAIDI calculations. Detailed discussion of this methodology is contained in PSE’s 2016 Service Quality and Electric Reliability Report filed with the WUTC. In summary, the IEEE methodology takes this approach:

Major Event – An event, such as a storm, that causes serious reliability performance problems.

Major Event Days- Days when outage events can be excluded from the reliability performance calculation. Types of Major Event Days include:

SAIDI Exclusion Major Event Days- Any day in which the daily system SAIDI exceeds the threshold value for the current year.

5% Exclusion Major Event Days- Days that five percent or more of electric customers are experiencing an electric outage during a 24-hour period and subsequent days when the service to those customers is being restored.

SAIDI—System Average Interruption Duration Index—This index is calculated based on the formula:

$$\text{SAIDI} = \frac{\Sigma \text{Customer Minute Interruptions}}{\text{Average Annual Electric Customer Count}}$$

SAIDI_{SQI}*: The SAIDI values used in this report are calculated with the numerator including customer interruption minutes for outage events longer than five occurring during non-Major Event Days events.

*SQI- Service Quality Index

All SAIDI values in the 2019 report, including restated values for performance prior to 2016, were calculated using the IEEE Standard 1366 methodology.

System Average Interruption Frequency Index (SAIFI)

Calculation of SAIFI values reported to the WUTC has not changed from past years. SAIFI values are calculated for single years excluding *5% Exclusion Major Event Day* outage events (see above). SAIFI is calculated based on the formula:

$$\text{SAIFI} = \frac{\Sigma \text{Number of Customer Interruptions}}{\text{Average Annual Electric Customer Count}}$$

SAIFIs_{SQI}*: The SAIFI values used in this report are calculated with the numerator including customer interruptions for outage events longer than one minute occurring outside of 5% Exclusion Major Event Days.

*SQI – Service Quality Index

SAIFI values calculation has not changed from past reports.

Momentary & Sustained Interruptions

Interruptions to customer service fall into two designations:

Momentary Interruption— brief loss of power delivery to one or more customers caused by the opening and closing of an interrupting device:

SAIDIs_{SQI}— any interruption five minutes or shorter

SAIFIs_{SQI}— any interruption one minute or shorter

Sustained Interruption—any interruption not classified as Momentary (above):

SAIDIs_{SQI}— Any interruption longer than five minutes

SAIFIs_{SQI}— Any interruption longer than one minute

Outage Event Codes

Before 2016, PSE used *Storm Codes* to indicate whether an outage occurred during normal conditions (NON), weather event conditions (WTH) or major storm conditions (MAJ). In 2016, Storm Codes were discontinued and replaced with *Event Codes* to incorporate the IEEE designation of Major Event Days:

MEJ – IEEE Major Event Day & Major Storm (5% of customers effected)

MEN – IEEE Major Event Day – non Major Storm

NMJ – Non IEEE Major Event Day, but Major Storm (5% of customers effected)

NON – Non IEEE Major Event Day & non Major Storm

BELLEVUE ELECTRIC RELIABILITY REPORT FOR 2019

This report summarizes electric service reliability for customers within the City of Bellevue for calendar year 2019. For the 15th consecutive year, service reliability as measured by SAIDI & SAIFI for Bellevue customers well exceeded that experienced by all PSE customers in the aggregate. Of the 96 distribution circuits serving Bellevue customers in 2019, 58 circuits had reliability numbers better than the system wide performance (27 circuits experienced no unplanned outages). 38 circuits had SAIDI and/or SAIFI figures that exceeded 2019 system wide performance values.

SYSTEM AVERAGE INTERRUPTION DURATION INDEX (SAIDI) SYSTEM AVERAGE INTERRUPTION FREQUENCY INDEX (SAIFI) FIVE YEAR HISTORY

PSE analyzes and reports on the performance of its distribution circuits using two standard benchmarks of the electric utility industry, SAIDI and SAIFI.

	SAIDI		SAIFI	
	BELLEVUE	PSE	BELLEVUE	PSE
2015	90.0	150.0	0.71	1.11
2016	107.0	148.0	0.74	1.06
2017	116.4	175.0	0.91	1.2
2018	111.3	145.0	0.71	1.02
2019	102.7	136.0	0.79	0.98

SAIDI figures in minutes per customer, calculated using the IEEE 1366 method
(2015 SAIDI figures recalculated to IEEE 1366 figures)
SAIFI figures in outage events per customer

SAIDI_{IEEE}: The System Average Interruption Duration Index is a measure of how long the average customer is out of service during the year, and is determined as:

$$\frac{\text{Sum of the customer outage minutes}}{\text{Total number of customers served}}$$

SAIDI figures are single year figures excluding outages that exceed the annual adjusted Major Event Day Threshold

Some customers will experience more outage minutes than the average and some fewer.

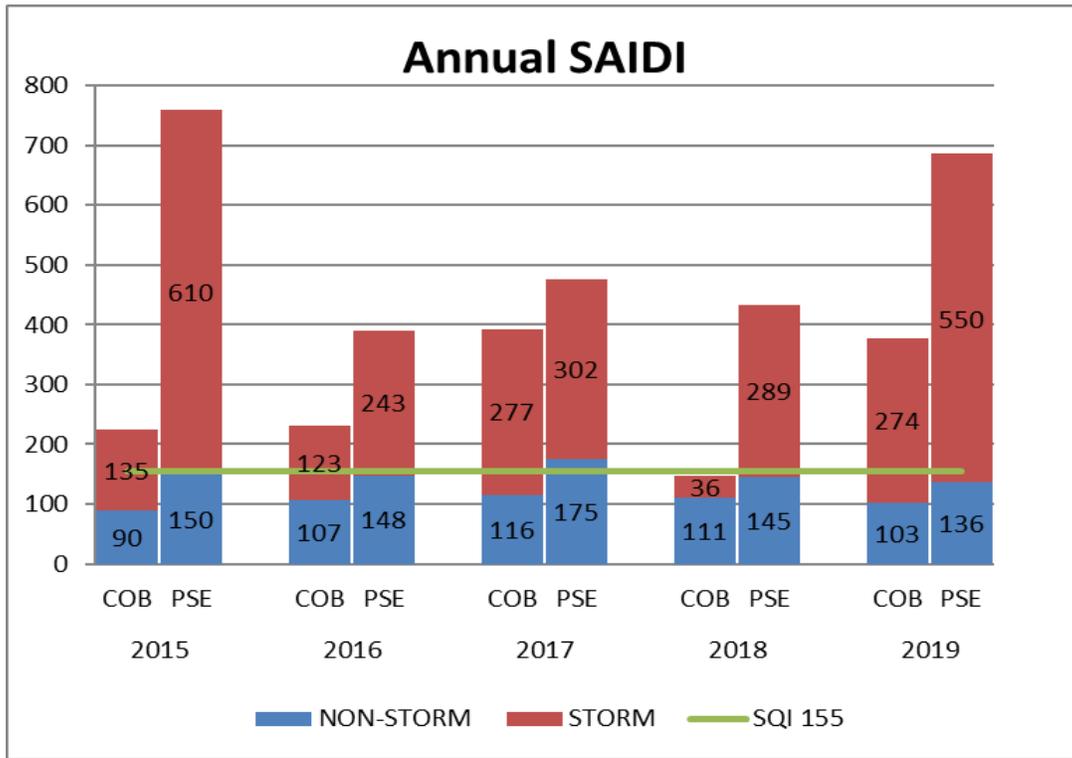

SAIFI: The System Average Interruption Frequency Index is a measure of how often the average customer in an area is out of service during a year, and is determined as:

$$\frac{\text{Sum of the number of customers affected by each outage}}{\text{Total number of customers served}}$$

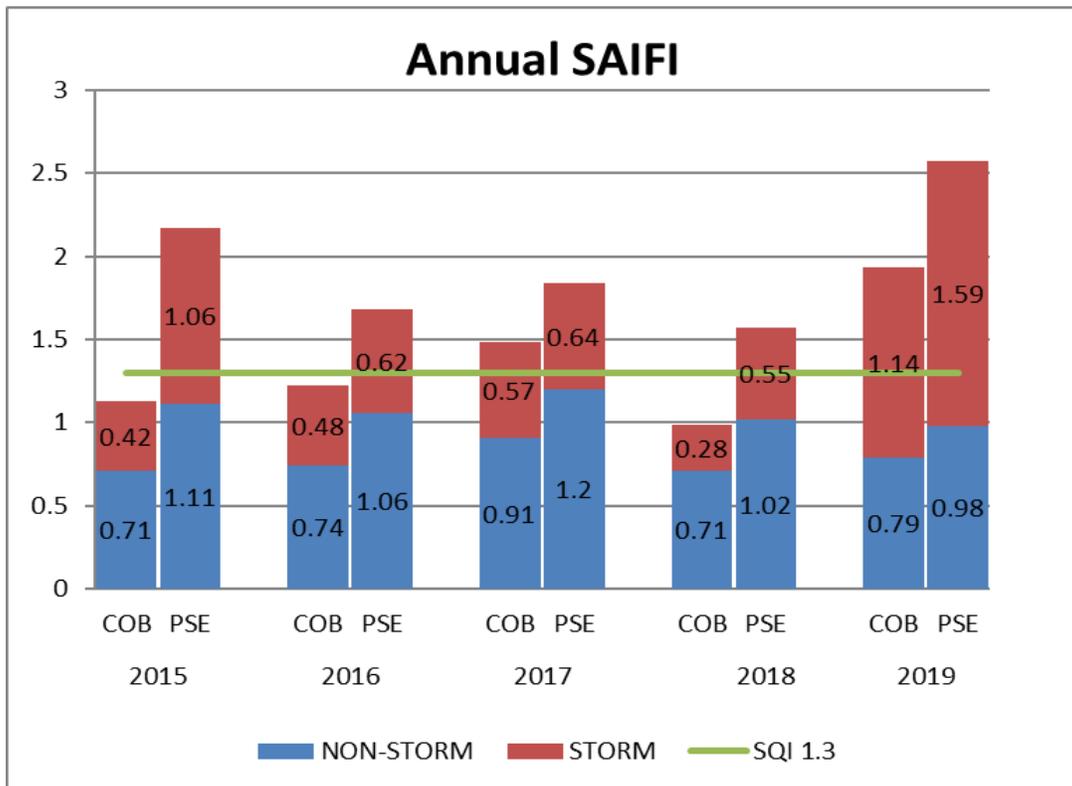

SAIFI figures are single year figures excluding 5% Exclusion Major Event Day outage events

Some customers will experience more outages than the average and some fewer.

Notes

- Figures exclude Major Event Day and Major Storm outages.
- SAIDI are 2019 single year figures calculated using the IEEE 1366 method which excludes Major Event Day outage events.
SAIFI are 2019 single year figures which exclude 5% Exclusion Major Event Day outage events.
- Includes one circuit outage resulting from substation bank outage.
- Includes one circuit outage resulting from transmission line outage.
- SAIDI & SAIFI figures greater than zero reflect inclusion of scheduled outages (including customer requested outages).

CIRCUIT	SAIDI	SAIFI	2019 Events Comments	Actions Completed in 2019	Planned Actions & Projects
<i>Circuits with planned actions or investigations</i>					
BTR-22	310.5	0.40	On February 13th two outages occurred; a tree and some limbs fell through an overhead lateral lines along 132 AVE NE and tree limbs fell into overhead lines along NE 60 ST. These two outages accounted for 223 SAIDI minutes.	Repairs were made and power restored.	An underground feeder conversion project along private property between 132 AVE NE and 140 AVE NE is in design. An underground conversion proposal along 132 AVE NE is being evaluated.
SOM-17	256.8	1.92	On June 9th a padmount switch and feeder cable failed causing a circuit outage. On August 19th a problem in underground distribution caused an extended outage. These two outages accounted for 147 SAIDI minutes and a SAIFI value of 1.	The underground cable was repaired and power restored. A project to replace the padmount switch and feeder cable was developed, designed and permitted.	The switch and cable replacement project is being scheduled.
EGT-12	164.9	1.80	On May 7th the circuit the had a Hotline Work Switch/Non-Reclose at the breaker set on to protect the crew working on the circuit; during switching the beaker tripped causing a circuit outage. On June 12th a problem in overhead distribution caused an extended outage. These two outages accounted for 126 SAIDI minutes and a SAIFI value of 1.6.	The Hotline Work Switch operated as designed to protect the crew. Repairs were made and power restored.	A Distribution Automation scheme involving Eastgate 12, Hazelwood 12, and Somerset 13 has been developed to allow more rapid restoration of service to customers in the effected area. Impementation (including construction) is planned in 2021.
<i>Circuits with completed 2019 actions - no additional corrective action needed</i>					
GOO-21	963.3	3.01	A large tree fell into overhead distribution and transmission lines causing extensive damage and an extensive outage. Low hanging ditribution lines were denergized for public safety and repair.	Repairs were made and power restored.	
KWH-25	438.9	2.03	A tree brought down overhead distribution tree wire. A squirrel got into the distribution bus causing a substation outage.	Repairs were made and power restored.	
FAC-13	379.5	2.04	A tree in overhead lines and an equipment failure cause two circuit outages.	Repairs were made and power restored.	
MLK-15	357.6	3.62	An underground feeder cable failure caused a circuit outage.	Repairs were made and power restored.	
LHL-25	316.2	1.70	An underground cable failure caused a large outage. The transmission line to the substation briefly deenergized to remove mylar ballons entangled in the line.	Repairs were made, the balloons removed and power restored.	
NRU-27	301.7	1.80	A distribution cable elbow and junction box failure resulted in an extended outage.	Repairs were made and power restored.	
EGT-25	275.6	2.64	Trees damaged overhead lines in two instances causing large outages.	Repairs were made and power restored.	
GOO-13	273.4	2.25	A tree fell into overhead distribution lines causing a circuit outage.	Repairs were made and power restored.	

SBE-23	240.8	2.00	A tree fell into overhead distribution lines and broke a pole causing a circuit outage.	Repairs were made, pole replaced and power restored.	
HAZ-13	215.1	1.18	A failed overhead transformer cause a large outage.	Repairs were made and power restored.	
MLK-13	213.3	0.74	Two underground cable failures caused extended outages.	Repairs were made and power restored.	
SOM-16	206.5	1.34	On September 7th the circuit had a Hot Line Work Switch/Non-Reclose at the breaker set on for safety of a Seattle City Light crew working in the area. A squirrel shorted the a line that normally would cause an outage to 24 customers but tripped the circuit breaker causing a circuit outage. This outage contributed 178 SAIDI minutes and a SAIFI value of 1.	The Hotline Work Switch operated as designed to protect the crew. Repairs were made and power restored.	
OVE-12	203.6	2.63	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage. A failed padmount switch caused a circuit outage.	Transmission switching restored power to the substation; repairs were made and power restored.	
MED-35	179.7	2.03	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage. A failed feeder cable splice caused a circuit outage.	Transmission switching restored power to the substation; repairs were made and power restored.	
KWH-26	165.1	1.28	A squirrel got into the distribution bus causing a substation bank outage.	Repairs were made and power restored.	
COL-23	155.0	1.08	Underground cable failures caused large outages.	Repairs were made and power restored.	
PHA-16	153.9	0.71	A car-pole accident caused a large outage.	Repairs were made, pole replaced and power restored.	
PHA-13	148.6	1.20	This circuit was tied to a KWH circuit when a squirrel caused a KWH substation bank outage.	Repairs were made and power restored.	
NRU-26	141.5	0.29	An underground cable failure caused an extended outage.	Repairs were made and power restored.	
KWH-23	136.2	1.17	A squirrel got into the distribution bus causing a substation bank outage.	Repairs were made and power restored.	
KWH-22	112.6	1.08	A squirrel got into the distribution bus causing a substation bank outage.	Repairs were made and power restored.	
OVE-15	93.2	1.73	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
EGT-11	83.1	1.02	A squirrel in an overhead cable termination caused a large outage.	Serviceman replaced fuses and restored power to customers.	
MED-36	82.2	1.35	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
SBE-22	79.3	1.15	A tree in overhead lines caused a circuit outage.	Servicemen removed tree from line and restored power.	
COL-26	77.7	1.50	A car-pole accident caused a large outage.	Repairs were made, pole replaced and power restored.	
CLY-26	55.6	1.19	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
CLY-25	42.9	1.15	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
HOU-25	28.7	1.02	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
HOU-23	28.1	1.03	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	

CLY-22	27.4	1.01	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
CLY-23	27.3	1.09	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
CLY-27	25.1	1.01	A failed transmission line insulator caused a transmission line outage, deenergizing the substation and causing a circuit outage.	Transmission switching restored power to the substation.	
<i>Circuits for which no corrective action is needed</i>					
NOB-21	291.8	0.40	A scheduled outage for customer work accounted for 98% of outage minutes on this circuit.		
NOB-14	241.5	0.39	A scheduled outage for customer work accounted for 98% of outage minutes on this circuit.		

- Figure exceeded PSE system wide average figure
- Figure exceeding system wide average and Service Quality Index
- SAIFI figure results in part from circuit outages due to 2019 transmission or substation outage

CIRCUITS THAT EXCEEDED PSE SYSTEM SAIDI OR SAIFI BY YEAR 2015 - 2019

During the five year period 2015-2019 73 circuits serving customers in Bellevue performed below PSE's average system wide performance in one or more years. Of these 73 circuits...

- 31 (42%) circuits performed below system wide performance once in five years
- 23 (32%) circuits performed below system wide performance twice in five years
- 11 (15%) circuits performed below system wide performance in three of the five years
- 6 (8%) circuits performed below system wide performance in four of the five years
- 2 (3%) circuit performed below system wide performance in five of the five years

Totals	95,942	22,623,086
Substation and transmission outages	13,798	2,424,166
Totals excluding substation & transmission outages	82,144	20,198,920
Scheduled Outages	3,098	742,426

Notes:

- 1 Squirrel caused substation outage
- 2 Broken Insulator caused Transmission Outage

Storm Codes:

- MEJ Not included in SAIDI or SAIFI calculations
- MEN Not included in SAIDI calculation, included in SAIFI calculation
- NMJ Included in SAIDI calculation, not included in SAIFI calculation
- NON Included in SAIDI & SAIFI calculations
